

Amendment to the Specification

The Paragraph beginning at Page 24, lines 1-6, is to be amended as follows:

As can be seen in Figure 27, the inner walls of recess 89 form a seat or shelf 83 upon which cartridge 6 rests after insertion. A number of resilient members in the form of springs 190 are provided to act against the cartridge as it is brought into position and also against the retainer catch, as it is locked over the cartridge. Consequently the springs act to absorb shocks during insertion and then to hold the cartridge fast with the cradle 4 and latch 7 by -securely biasing the cartridge in place against the latch. In an alternative the springs might instead be located on latch 7 in which case cartridge 6 would be biased against cradle 4.
